

**Integrated Algebra 2**  
**Unit: Transformations**  
**Vertical and Horizontal Shifting Worksheet #3**

Name: \_\_\_\_\_

Date: \_\_\_\_\_

1. Use the graph of the elementary, or arbitrary, function  $y = h(x)$  below.

- (i) State the transformation(s).
- (ii) Sketch an accurate graph of the transformed function. Please sketch each graph on its own coordinate plane.

<p>a. <math>y = h(x) + 2</math></p>	<p>b. <math>y = h(x + 2)</math></p>	<p>c. <math>y = h(x + 2) + 2</math></p>
<p>d. <math>y = h(x) - 3</math></p>	<p>e. <math>y = h(x - 3)</math></p>	<p>f. <math>y = h(x + 2) - 3</math></p>

2. If the point  $(-7, 3)$  lies on the graph of an elementary function  $y = g(x)$ , find a point that lies on the graph on the function below.

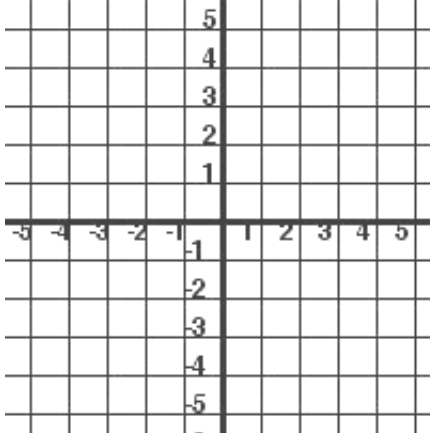

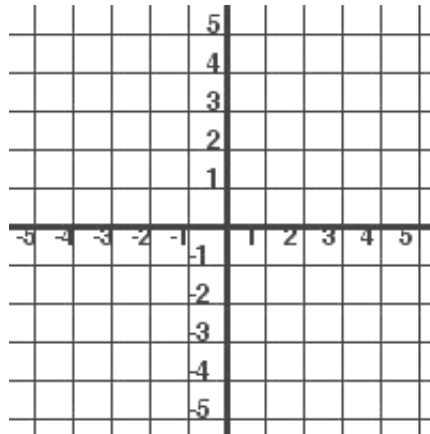

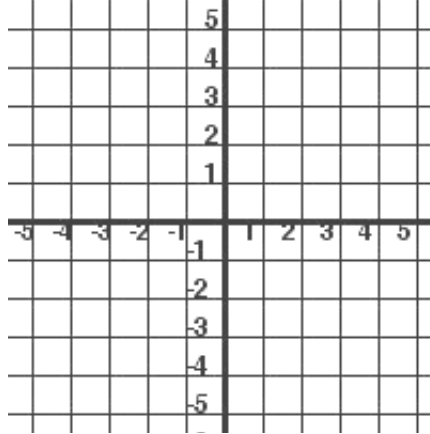

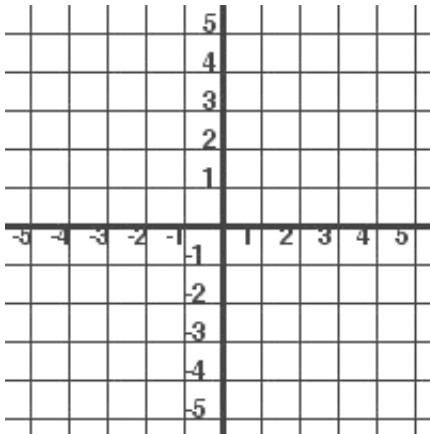

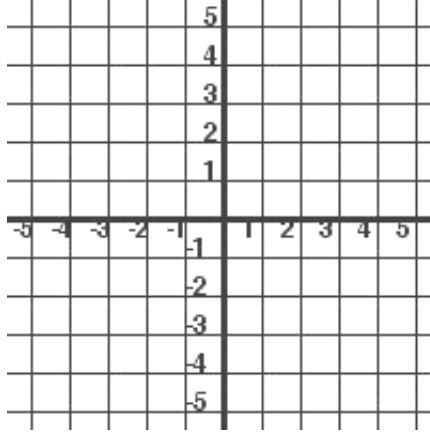

a.  $y = g(x - 3) - 8$

b.  $y = g(x + 4) - 9$

c.  $y = g(x - \sqrt{3}) + 11.5$

**Integrated Algebra 2**  
**Unit: Transformations**

3. Using the elementary function  $y = x^2 - 2x - 3$ , create a new equation that will transform the given equation in the manner indicated.
- a. Right 7 units                                      b. Down 3 units                                      c. Left 4 units, Up 8 units
- 
4. For each of the following:
- (i) Identify the parent function.
  - (ii) Identify the transformation(s) on the parent function.
  - (iii) Sketch an accurate graph of the transformed function.
  - (iv) State the domain and range of the transformed function.

<p>a. <math>y = x^2 - 3</math></p> 	<p>b. <math>y =  x + 2 </math></p> 	<p>c. <math>y = (x - 1)^3 + 2</math></p> 
<p>d. <math>f(x) = -4 + \sqrt{x}</math></p> 	<p>e. <math>g(x) = (x + 1) + 2</math></p> 	<p>f. <math>h(x) = 2^{x+3} - 3</math></p>
